

TRUCK DECK SERIES

DECKS FOR REAL WORK

All Trailtech decks come pre-wired and ready for installation. The Trailtech Truck Deck comes standard with a tubing headache rack, complete with rear window protection and a recessed gooseneck hitch plate. All truck decks are offered with wood decking, stake pockets with rub rails and rubber mounted and recessed lighting. The tubing mainframe and crossmembers are standard construction for all decks, and channel sills underneath allow the deck to mount to your cab and chassis easily. These decks are sturdy, well built and able to turn your truck into a real work truck.

FEATURES

Recessed Gooseneck Hitch Plate

Each Trailtech deck comes with a recessed gooseneck ball mount. Every plate has two gooseneck ball placements, and two locations to hook safety chains.

Headache Rack

All standard Trailtech truck decks come with a 4 inch X 2 inch formed headache rack as standard, proving both protection to the cab and the most usable deck possible.

Lighting

The design of the rear bumper allows the rubber recessed lighting to be placed into structural tubing protecting all wiring and connection from the elements, giving the owner years of trouble free lighting.

Rub Rail and Stake Pockets

Every deck is built with a rub rail and stake pocket combination on each side. This rub rail acts as protection for the side when loading with equipment, or when using ramps. The stake pockets used are true DOT rated securement points for tying load down, and these same pockets can be used to accommodate picket sides.
